UNIVERSITY OF DAYTON
COLLEGE OF ARTS AND SCIENCES
SCHOLARSHIP 2009
Preface: Scholarship 2009

College of Arts and Sciences

In calendar year 2009 faculty members in the College received over 31 University grant awards and 137 national grant and fellowship awards. College faculty also authored or created 12 books, 40 book chapters, 158 journal articles and reviews, 151 performances, and 88 exhibits. This publication honors these scholarly and artistic achievements.

The College held its annual recognition of outstanding faculty accomplishment on April 16, 2010. Faculty members honored as recipients of the College’s faculty awards were: Dr. Said Elhamri (physics) for outstanding teaching, Dr. John Heitmann (history) for outstanding scholarship, and Dr. Betty Youngkin (English) for outstanding service. Brief articles are included in this publication about the exemplary commitments of these faculty colleagues to their students, their scholarly fields, and the University.

The College also recognizes the accomplishment and dedication of its faculty retirees, Dr. Al Fratini (chemistry), Dr. Elke Hatch (languages), and Dr. Betty Youngkin (English). Collectively, these colleagues have contributed 87 years of valuable service to the College.

Finally, this publication recognizes the installation in February of three endowed faculty chairs: Dr. Patricia A. Johnson, as the fifth holder of the Alumni Chair in Humanities; Dr. Vincent J. Miller, as the first holder of the Kenneth and Evelyn Gudorf Chair in Catholic Theology and Culture; and Dr. David J. O’Brien, as the third University Professor of Faith and Culture. It is a privilege to work with these distinguished teachers and scholars. Their work draws widely upon the resources of the humanities disciplines to address some of the most pressing questions of our time within the context of our mission of education in the Catholic and Marianist traditions.

I offer this publication with gratitude for the outstanding work and vibrant collegial culture of the faculty of the College of Arts and Sciences at the University of Dayton.

Robinson, J. B. (Supporting). "In the Footsteps of Katherine Wright: Promoting STEM Women through LEADER." Sponsored by the National Science Foundation, $610,317. (September 1, 2008 - August 31, 2012).

Fostering interdisciplinary conversations

Vincent Miller studies Catholicism through decidedly contemporary lenses: consumer culture and globalization.

It’s a perfect fit for the Gudorf Chair in Catholic Theology and Culture, a position designed to facilitate scholarship that examines the complexities of American Catholicism in its historical and cultural contexts.

Miller, who was appointed the first Gudorf Chair in August 2009, is the author of Consuming Religion: Christian Faith and Practice in a Consumer Culture. He currently is working on a book about the effect of globalization on religious belief and communities.

“I’d like to contribute to the further development of the religious studies department’s national recognition,” he said. “Because of the unique focus of the graduate program and the diverse strengths of the faculty, our department has the ability to make contributions to the national conversation about theology and the Church in America that no other department can.”

Miller’s own scholarship is a good example of this interdisciplinary conversation.

When examining culture from a theological viewpoint, Miller said it’s easy to fall into two traps: “The first accepts the dominant culture, or a given cultural theory, as scripts the Church must follow. The second reduces culture to theology, seeing a theological error behind every cultural problem.

“I try to do something in between,” he added. “I take the materialism and randomness of culture seriously but do so with an eye to the problems it poses for the Church and theology.”

Students are a real asset in such scholarship.

“In the undergraduate classroom, you can feel the pulse of cultural change,” Miller added. “Our doctoral students are committed to addressing predicaments the Church faces today.”

Miller asks how consumerism and globalization have affected such issues as morality and community.

“Globalization is placing us into an unprecedented moral geography,” he said. “With just about anything we consume, we act globally, yet we don’t see the consequences of our choices. At the same time, we watch disasters unfold around the world in real time, but have no direct way to reach out and help victims.”

“The nature of community changes as well,” Miller added. “Space no longer binds us together. We are freed to segregate into communities of the like-minded. Religious communities cease to be places were deeper communion is fostered. The full wisdom of ancient doctrines is often overlooked as believers mine traditions for whatever will provide a clear identity as they face off in myriad cultural conflicts that divide our society and Church.”

Miller sees UD as an ideal place to nurture his work.

“I was attracted to UD because there’s a broad conversation across the campus, which is rare for a university this size,” he said. “That’s enormously valuable and essential to the University’s purpose.”

“UD is very committed to being the university of this place,” Miller added. “There’s something deeply Catholic about UD’s conception and practice of its relationship to Dayton.”

On a quest to constantly improve his work in a sacred profession

It started when Said Elhamri was in fifth grade, in a classroom in Morocco, when he was helping his classmates master Arabic grammar for his native country’s national exam.

“It just felt natural,” the physics professor said of his first teaching experience. He went on to help classmates with history, geography, math and French. He taught while an undergraduate and graduate student. Now, he’s been awarded for his service in what he calls a “sacred profession.”

“I think of myself as a teacher first and a researcher second,” said Elhamri, who in 2007 received an outstanding scholarship award for his work in semiconductor physics. “When I walk into the classroom, nothing else matters. I focus on the students only.”

Elhamri is driven by his desire to see a better world.

“By the time my kids are in college, these students will be running the country. For the sake of my kids and everyone else, I want my students to be better decision makers, better teachers, better doctors,” he said. “When I look at my students, I also see the faces of the parents who worried about how to get their kids to college. If I don’t do right by their kids and give them a quality education, I betray the trust of the parents.”

For Elhamri, that quality education is delivered in part by making physics relevant to students’ lives and by supporting his students outside the classroom.

“I tell students science made the cell phone possible and many other things they use in their everyday lives,” said Elhamri, who never keeps his notes from one semester to the next. “I try to think of a way to present the material a different way each semester. Science must be current, relevant and important, and this helps. Several years ago, no one was talking about climate change. Today, this has become very important.”

Among his sources of inspiration, Elhamri counts his own teachers, such as a college professor who showed up on campus in his pajamas late one night after receiving a call from Elhamri saying he’d solved one of the difficult problems assigned in class.

He also counts his colleagues.

“I’m very lucky to be surrounded by great teachers,” Elhamri said. “I learn a great deal from them, as we often exchange ideas on teaching.”

Indeed, openness to new ideas is something Elhamri works to instill.

“I tell students if they learn nothing else from me, they should learn never to judge something they don’t know enough about.”

**Other Reviews**

Other Reviews
Service always has been at the heart of recently retired English professor Betty Youngkin's work at UD. Shortly after arriving at the University, she co-founded the Dayton Literacy Project. This led to the creation of literacy programs in the City of Dayton while providing service learning opportunities for students.

In 1994, Youngkin integrated a service learning component into her business and professional writing course. Students learned about and completed writing projects for charitable organizations.

“It showed business majors significant opportunities to serve an organization through writing,” she said. “The students loved getting involved in the organizations, and many went back the next semester to volunteer.”

In 2000, she completed 150 hours of service to mark the University’s 150th anniversary. She spent nearly a month volunteering at a United Church of Christ conference center in Blowing Rock, N.C.

“I had a ball,” Youngkin said. “The basic physical work did wonders at the end of a school year in my mental and spiritual recuperation.”

In March, the Center for Social Concern (and other sponsors) gave Youngkin the Miryam Award for her efforts to empower women on campus — work that has spanned her UD career. Youngkin served on the women’s studies committee from 1994 to 2004 and as director of the women’s studies program from fall 1996 through spring 1999. She was appointed to the President’s Advisory Council on Women’s Issues in the late 1990s, helped establish a major in women’s and gender studies, and served on the Provost’s working group to guide the development of the Women’s Center.

“We now have a space where all kinds of important work can be done to reach out to all women and men,” Youngkin said. “It’s important for this current generation to have dialogue because it’s so easy to forget what’s changed and what’s been gained.”

Youngkin also thinks it’s crucial to advocate for women’s sports today. She remembers the history of Title IX at UD, when in 1975 three women (one from the history department, one from the athletic department and one from physical education) worked together for equity in sports and petitioned for the first women’s studies program with a minor.

“They and now, we realized Title IX was not just about athletics,” she said. “This is about the whole educational future for women in the United States. We need an academic effort, too.”

Youngkin also has served the University in numerous roles. She’s served as president of the Academic Senate and chair of the Faculty Board, has been a grievance officer and member of the Faculty Hearing Committee on Tenure and Academic Freedom, and has mentored undergraduate and graduate students. In retirement, she looks forward to continuing her research, spending more time with her two granddaughters, and traveling with her husband, Bill.

“I don’t know what this next phase of my life will be, but I’m sure it will be as exciting as the other phases,” she said. “I’ve had a fabulous career.”

Journal Articles

The a-ha moment came toward the end of the third year.

“I remember that excitement when it all clicked and everything came together,” philosophy professor Patricia Johnson said of one of her Core program students. “He went on to do very creative things that weren’t particularly tied to what he majored in, but they all called on creativity across disciplines.”

Now, as alumni chair in the humanities, Johnson will build upon her longtime commitment to interdisciplinary learning and diversity.

She has two goals for her four-year appointment, which began in August 2009. First, Johnson will work with the humanities departments to more intentionally and fully introduce diversity into the first-year curriculum. Second, thanks to an LTC Innovation Grant, she will be providing faculty workshops on diversity across the curriculum. The first will be held this fall for two faculty from each of the humanities departments, along with several from education, engineering, and business. Each faculty member will develop a curricular project that focuses on pedagogy, content or both.

“My hope is that faculty who participate in the workshop will have time to reflect on how diversity relates to improving the curriculum,” Johnson said. “This will help them further develop courses and provide students with experiences of different pedagogies and materials. This also will allow faculty to better reach a diverse population and use a broader range of instructional materials.”

Johnson’s allegiance to such learning comes from her own background. It started with her nontraditional undergraduate education and continued as she helped develop and refine the Core program, which she’s worked on since shortly after arriving at UD in 1979. Johnson’s work in philosophy and comparative religion requires her to integrate multiple disciplines, and her years spent teaching in UD’s undergraduate philosophy program for the Marianists in Bangalore, India, allowed her to recognize how much we can learn from other cultures and integrate some of that into her classes in Dayton.

In addition, Johnson helped develop UD’s women’s studies program in the 1980s. Today, she believes UD needs to continue to develop majors and minors that enable students to learn about human diversity and how diversity contributes to understanding social and cultural institutions.

“How do you provide a certain atmosphere and curriculum that really addresses — from a good academic perspective — the realities of the world in which we live? How do we understand that from something other than a white male Western perspective?,” she asked. “I think we’ll see more faculty pulling from other disciplines and using an interdisciplinary pedagogy to address the real issues that affect our nation and world.”

Johnson’s appointment also allows her to focus on her research and writing, including a current project regarding friendship in which her focus on diversity remains intact.

“I’m not really looking at the intimate aspect of friendship,” she said. “I’m looking at it as a human relationship that enables different people to come together and work reciprocally to create a world worth living in.”

Driving the academic study of automobiles

Cars include more computers than any other manufactured object. They play an important role in almost every film of any significance. Until recently, one out of every seven U.S. jobs was somehow tied to the auto industry.

Through such scholarly works as his book The Automobile and American Life, history professor John Heitmann is out to educate people about these and other facts related to the industry that has been the subject of his academic career for the past 12 years.

“The automobile is arguably the most important technology of the 20th century, not just from an economic perspective but also in how we live our everyday lives,” Heitmann said. The book describes how the widespread adoption of the automobile transformed American life, as well as the many ways cars are depicted in film, music and literature. The book has netted not only academic accolades, but awards from the likes of the American Library Association.

Still, while Heitmann has been fascinated with cars since childhood and owns a 1971 Porsche he restored, the automobile wasn’t always the subject of his scholarly pursuits. He also has taught and written extensively about the history of science, technology, the environment and industry.

Since joining the UD faculty in 1984, he served as chair of the history department from 1991 to 1995 and as Alumni Chair in the Humanities from 2005 to 2009. In the latter role, he developed and team-taught interdisciplinary courses and organized three Humanities Symposiums: Cities and Exurban Growth, Cities and the Environment, and Post-Katrina New Orleans: Race, Class and History. All this work is tied to his scholarly interests in sustainability, the environment, economics, exurban growth and the relationship of universities to their home cities.

All of these interests, of course, are tied to the automobile, which permeates American culture and its economy — and, of course, it’s an interesting time to be a scholar in this field. Now, we’re seeing the birth of what Heitmann calls the “second auto industry,” in which alternative energy sources, such as electric and hybrid technology, and new centers of manufacturing will have increasingly important effects. While all this will dramatically affect the auto industry, Heitmann doesn’t see much change for the American public.

“Americans like to drive, and beyond the big urban centers, they’ll still depend on personal transportation in their everyday lives,” he said. “They’ll just be driving a different kind of car.”

These days, Heitmann is starting work on a book about the cultural history of American auto racing, developing an exhibit for the Petersen Automotive Museum in Los Angeles, and adding to The Automobile and American Life in preparation for the next edition.

For David O’Brien, Catholicism isn’t black and white — more like red, white and blue.

The renowned scholar has written and lectured extensively on American Catholicism, served as president of the American Catholic Historical Association, and has received numerous awards for his work, including the 2005 Marianist Award. He joined UD as University Professor of Faith and Culture in July 2009 after retiring from a 40-year career at the College of the Holy Cross teaching American Catholic history and Catholic social and political thought. Also while at Holy Cross, O’Brien was the founding director of the Center for Religion, Ethics and Culture, and he developed an interdisciplinary peace and conflict studies program.

During the few years he’ll spend at UD, O’Brien will help the religious studies department further develop its doctoral program.

“We’ll work to gain more national visibility and help the excellent Ph.D. program become better known,” said O’Brien, who also is well-known for his scholarship in religion and politics. “We hope to draw attention to the creative work and remarkable faculty at UD.”

This fall, O’Brien also will begin teaching an American studies course in the religious studies department, serve on an advisory council to examine how to better integrate faith and work, and teach a course examining the role of religion in American society for master’s students in pastoral ministry. In addition, O’Brien plans to help develop seminars and, in the next year, join forces with Vincent Miller, Gudorf Chair in Catholic Theology and Culture, to bring preeminent scholars to UD for a conference to discuss American Catholic life.

O’Brien outlined some of his thoughts on this and other subjects in an inaugural address he gave at UD in February. His discussion included the important role played by American Catholic higher education in fostering civic responsibility.

“Here at UD, the pastoral leadership of the Marianists, the remarkable community development work of the Fitz Center and the University’s nationally recognized commitment to the city of Dayton all demonstrate that academic and Christian responsibility both draw us more deeply into the human family and into partnership with others,” O’Brien said during his address. “We really care, and we hope our students really care, about how history turns out.”

“The University of Dayton’s work and witness with the Dayton community stands out,” O’Brien later added. “We need to think a little harder about how training in citizenship can be more fully embedded into the whole range of the University’s research and teaching.”

On civic engagement, as on Catholic thought, O’Brien thinks UD is well positioned to offer national leadership.

An American historian and not a theologian, O’Brien, calls himself an “Americanist,” concerned with the American as well as the Catholic experience and responsibilities of American Catholics. He hopes to complete a book on that subject during the coming year.
