Experiential Learning at the University of Dayton:

After working for four work terms with Midmark Corporation, a global manufacturer and supplier of healthcare products and equipment, Bridget Dues has accepted a full-time engineering position with the company.

Over her four work terms, she was given the opportunity to work in four different Midmark engineering groups to better understand each of them and determine the direction of a future career. She experienced quality, operations, new product development and sustaining.

“My co-op experience was incredibly beneficial to my future career,” Dues said. “Personally, participating in the co-op program helped me to pay for my education while still learning, directed me on my career path, expanded my network tremendously and allowed me to secure a full-time job before graduation. I would highly recommend the co-op program to anyone!”

What Employers are Saying:

UD co-ops have consistently exceeded expectations. The average UD student has been a clearly better co-op than the average co-op from other schools.

UD students are excellent. They are well spoken and engaged in projects. UD should be very proud of their students and this program.

UD Partners with a Large Number of Employers to Offer a Variety of Work Experiences.
