

Bee Kind to Pollinators!

What Are Pollinators?

Any animal that moves pollen between flowers, allowing the plant to reproduce.

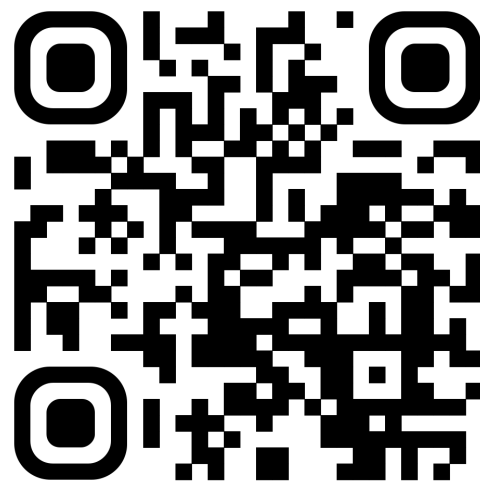

Why are they important?

Native pollinators are the most effective reproduction method for native plants.

75% of crop species we grow for food rely on pollinators.

Pollinator Habitats on Campus:

*UD's Solar Prairie
Stuart Hill's Grass Prairie
Old River Park*

How Can I Help Pollinators?

Put out bird and hummingbird feeders

*Make a **Bee Bath**: Put out a shallow dish of water with some rocks/sticks. The bees need a drink too!*

They're Quick! The European Honeybee can fly up to 15 mi/hr!

Honeybees beat their wings 11,400 times per minute, causing them to buzz!

Why did the bee go on Shark Tank?
She was starting her own **bees-ness!**

What did the bee say to his girlfriend?
I can't help **pollen** in love with you.
